Janice is beginning her 10th year as a materials science professor at the University of Illinois, following her post-doc at Cornell. She advises 5 graduate students, two of whom have been with her for a few years now. She's very easy to talk to so she’s very popular with the students. It's a treat to do research with her; she gets very excited about new discoveries and loves to hear about what her students accomplished. She's generally available to her students, both in office and online, because she's very up to date with the latest technology. However, her first priority is her two kids: 6 and 8 years old. She's very comfortable with paper writing; when she collaborates, she often does the bulk of the writing because her colleagues recognize her skill. To write papers, she often looks to people she's worked with in the past, because she finds it comfortable working with old colleagues.
